Hi

I am currently using the following formula
=SUMIF(Mo!\$A\$1:\$A\$999,\$A10,Mo!\$D\$1:\$D\$999)

the problem is, I dont want to use the SUMIF, I want to use the VLOOKUP, but the VLOOKUP does not want to work so nicely. My other formulas are easily "rattled" should I try and touch the formatting of the sheets cells.

Is there any other functions I can use that will give me what I want?

Regards
Sonar :)
