try sumif where b1 has your date
=sumif(b2:b22,"<"&b1,a2:a22)

I am attempting to get results from the following spreadsheet:

Column D	Column N
Product No.	Date Sold
11	4/15/04
11	5/15/04
11	9/30/04
18	2/22/04
18	7/4/04
18	8/28/04

I have the total number of product no. 11 sold. From the above data I need to find out how many of Product No. 11 was sold prior to 5/25/04 and how many were sold after 5/25/04. I've tried COUNTIF, SUM(IF), COUNT(IF), SUMPRODUCT as array formulas and not. Any assistance would be appreciated.
