Hi! Thanks for the answers!

still encountering problems with SUMIF. The actual table contains several columns with data.

an example:

A	B	C
1	green	red
2	John	4 2
3	Fred	1 3
4	Eric	111 1
5	Eric	5 3
6	John	5 4
7	Eric	5 2
8	Fred	5 2
9	Eric	5 1

=SUMIF(A2:C9,"John")

The result is 0, how to get 2+4=6 as a result?

Thanks a lot!

tom

Hi!

given the table below – example –

John 2
Fred 3
Eric 1
Eric 3
John 4
Eric 2
Fred 2
Eric 1

1. I want to count how often a name occurs
e.g. Eric = 4

2. I want to calculate the sum of the values for a certain person
e.g. Eric = 7

Any solution?

Thanks!

tom
