Dave,
Thanks for your help. I was hoping to utilize one of Excel's built-in functions without resorting to a UDF. But if that's the only way to do it,
then I guess I'll have to use the UDF.
Thanks again,
Bob

"Dave F" wrote:

Well, there's a UDF, `getformula()` that you can create. Here's some info, along with instructions about how to make it work:
<http://www.myops.org/dmccritchie/excel/formula.htm> Post back here if you have questions.

Dave

Is there a way to test if a given cell contains a formula? I have

Re: Testing for existence of a formula

tried
using the LEFT, LEN, TYPE, and CELL functions, but to no
avail.
Any help would be greatly appreciated.
Thanks,
Bob
