I have the following formula that I wish to return a value for

=IF(OR(C7=Car, Van, Bike),D7,"Enter Price")

Car, Van Bike are values within a Drop down list that I select in Cell C7 etc

I am getting an error message 'There is more than one Cell with this label' for Van – what does that mean and how can I overcome it? I don't have any Range Names with this label.

I've removed Van from my formula i.e. =IF(OR(C7=Car,Bike),D7,"Enter Price") and when I copy this down past C8 I get =IF(OR(C7=Car,Car),D7,"Enter Price") – how can "Bike" now change to "Car"??

Is it because the text I'm looking for are from a dropdown?

Thanks
