Debra Dalglish has some notes on Advanced Filters here:

<http://www.contextures.com/xladvfilter01.html>

Easier to follow than in XL Help.

Hope this helps.

Hey Jim –

Wanted to get back and acknowledge your advice; been sitting here reading.
This is really interesting.

If I'm reading the 2000 manual correct, it looks like I can have multiple
unique 2-criteria data sets instead of just one, static 2-criteria data set.

And that's by putting the criteria on the SAME row? And then I can have a
bunch of those unique data sets going down the two columns?

Really appreciate your help so far.

Good morning.

In all my years, I've not come across this. Searched the Board; there's a post suggesting drop-down lists, but that would require too much ongoing manual input (I think).

- 1) I have 2 criteria that must be met
- 2) I have a table of data that includes many rows of data that will meet the criteria, many that will not.
