You can create in a different section a new table that contains the equivalent of the Letter Grade, for Example  
Student 1 58 52 40 34 and Total or AVG Column  
On each of the cells you have a vlookup formula that looks for the Grade on the Table of codes and Marks and returns the marks.

Given a table of exam grades and corresponding marks as below, how do I sum a series of grades?

E.g if grades are A\*,A, C & D how do I total the marks of 58, 52, 40 and 34.  
Assume data is columns B to J with (some) blank column entries.

TIA.

Codes	Marks
A*	58
A	52
B	46
C	40
D	34
E	28
