I would suggest you use a Dynamic Range for the PrintRange.

See Debra Dalgleish's site for instructions.

<http://www.contextures.on.ca/xlNames01.html#Dynamic>

BTW.....I assume you mean "borders" and not "gridlines" as gridlines cannot be turned on/off via CF

I have worksheet conditionally formatted to show gridlines and data as rows are used. How do I set conditional print area to include only those rows showing?
