I did a quick test of this, and it looks like the options buttons do what you claim. The problem is that they are all linked together, so only one option button on the whole page/sheet can be selected. This means this will not work for me.

For example, I have more than one question like:

1. question 1

- yes
- no
- N/A

2. question 2

- yes
- no
- N/A

If I select yes for question one, then great. If I then select no for question 2, my answer for question one is deselected.

I dont know if there is a way of grouping the options together. Please let me know if I am missing something.

.
