The formula you want in column "I" is as follows
Assuming you begin with row 1 and that the order
of operations is as you have written:

=E1+F1*D1

If you actually want to multiply the sum of columns
E and F times column D, the (E1+F1)*D1

To apply this to every row, click on the tiny black box
on the bottom right of the cell with the above formula
and drag down to row 260.
