Assume A1:A2000 are numbers that you are trying to match with B1:B2000, you can try this:

```
C1 = IF(ISERROR(MATCH(B1,$A$1:$A$2000,0)),"No Match","Match")
C2 = IF(ISERROR(MATCH(B2,$A$1:$A$2000,0)),"No Match","Match")
etc.
```

Now if you want to view all the numbers in column A that also exist in column, simply turn on autofilter and filter out all the "No Match".

Hope this helps.
