Hi Roger

The problem is to consider a criteria ("2") in addition to the filter (marking for a certain department).

For better understanding: the sum is required for 1, 2, 3,... On the basis of these results, a diagramm will be built.

There is little opportunity to reorganize the sheet or to create separate areas for assistance because it's not "my" worksheet.

Bernd

Hi Bernd

Where are you putting the SUBTOTAL formula? Is it within the range of data and therefore possibly getting confused? Try inserting a row above your first row and putting the formula there.
=SUBTOTAL(9,C2:C1000)
adjhust range to suit

Hallo,

The following worksheet (as an excerpt of a bigger one) is to be analysed:

Re: SUM of certain cells after Autofilter

x x 2
x 1
x 2
2

After Autofilter regarding x in any column the sum of VISIBLE cells with the value 2 should be calculated (e.g. 2 for the first column and 4 for the second one). The function SUBTOTAL seems not to give a proper result considering conditions). Any idea?

Regards

Bernd
