Hi – I am a noob to Excel. I downloaded the checkbook register from the Excel website figuring it would be an easy way for me to become familiar with the program. Here's what I downloaded:

<http://office.microsoft.com/en-us/templates/TC101909831033.aspx?pid=CT101438521033>

I put my "Balance Forward" in the top row, then added a deposit. The deposit and the "Balance Forward" added correctly.

Then, I entered a check, but for some reason the amount of the check, which was placed in the Debit cell, did not automatically subtract from the balance.

Question – How do I get this template to work?

Thanks

Joe

P.S. Running XP Pro Service Pack 2 with Office 2007 Professional
