I have just gone through and configured my Exchange 2000 server (SP3) with a POP3 and SMTP connector to transfer mail to our ISP.

Mail goes out and comes in but all of the mail coming in is in text only format. All attachments are being converted to text and being placed at the end of the message. HTML mail comes in as HTML code only. Finally, all of the messages that come in have the subject line stripped off.

Both the ISP and Microsoft say that there is no problem with the configurations, yet I am going to have a riot here if I can't get this working.

Any help is appreciated.
