Hi Sabo,

Thanks for your posting back.

As your servers are clustering, you can synchronize the two metabases between the nodes using the following script:

```
%systemroot%\system32\iisnfg.vbs /copy /ts TargetComputer /tu TargetUser /tp TargetPassword
```

NOTE: Because of the "possibility" of the two or more nodes to have a different %SystemRoot% folder, you could copy these two files onto the shared drive in a location of the FTP/WWW information. Also, please ensure that the ability to execute VBS Scripts has not been disabled in a domain policy; otherwise, they will not be able to run and may fail. Keep in mind that some anti-virus utilities may keep this from executing as well.

Have a nice day!

Thanks & Regards

Alan Sun

|Alan,

| I think that one of my cluster nodes has corruption in the
metabase

|file. I don't have a good backup, because I don't know when the

|corruption happened. How does one troubleshoot this? Those

articles

|pertain to if know you have a good backup.

|

| Please help.

|
