That article states that Full Control permission needs to be given in ADSI Edit to the Exchange Domain Servers group to the servers that own the public folder hierarchy. And to make sure that Allow Inheritable permissions were enabled. I found that the inherit was enabled, and made sure that in ADSI Edit I granted full control to the Exchange Domain Servers group to the servers:

CN=Services, CN=Microsoft Exchange, CN=org\_name, CN=Administrative Groups, CN=AG\_name, CN=Servers, CN=Server1, Server 2

Which indeed was not set... the Exchange Domain servers group was inheriting only Read, Create Objects, and Administer Information Store. I gave full control to this group to all servers in all administrative groups, and then tried to mount the store and got the same error.

The article you gave me says that full control must be given on all servers listed in the msExchOwningPFTreeBL attribute... I could not find that attribute anywhere. It was not in the list of attributes in the filter box either. I granted Full control rights to the group all the way up the tree to the CN=Administrative Groups, and all the way down to both CN=First Storage Group (in each server). And still can't mount the Public Folder.

I also verified that these rights are given in the Exchange System Manager tool.

I'm at a loss for what to try next...

-David

This sounds like a permissions problem. Please look over the following article:

[http://support.microsoft.com/default.aspx?scid=kb;\[LN\];313865](http://support.microsoft.com/default.aspx?scid=kb;[LN];313865)

One thing to remember is explicitly added permissions on an object override permissions that were inherited for a user or group.

microsoft.public.exchange.admin: Can't Mount the Public Store

I would doublecheck and make sure you don't have any explicit permissions applied for Exchange Domain servers group on any object which would override any inherited permissions.

Hope that helps,  
Russ Maxwell
