There are a couple places and ways to deal with this.

One is to expose the security tab on all of the ESM objects. To do this open regedit on the system you are administering Exchange

from (or anywhere you have the Exchange administration tools installed) and go to

HKEY\_Current\_User\Software\Microsoft\Exchange\EXAdmin

Add a regD\_WORD key

ShowSecurityPage

With a value of 1

You will now see the security tab on everything in the ESM.

Next drill down to the MailboxStore and add the Explicit allow on the Send As and Recieve As for your account.

OR

With the same settings made in Reg edit get properties of the org object in ESM and remove the Explicit Deny on the Send As and

Recieve As for your account. This will remove it through out the organization through inheritance.

A Deny does overrule an allow IF they are both inherited. An explicite allow at the store level will over-ride the inherited Deny.

I hope that helps,
