I recently upgraded from SBS2K (exchange 2K) to Windows Server 2K3 and Exchange 2K3 Enterprise. Before in exch 2k, I was able to access the other users mailboxes. Either by File – Open Other Users folders, or by adding the user from Tool – Email Accounts – View Change ..... Advanced tab – Add. My Id is a member of the Administrators tab...

Is this still possible in 2k3? If so how?

Dan
