-

my office have a win2003 standard sp1 GC , is a main AD , then install exchange 2003 enterprise sp1
now the win2003 AD can't enable volume shadow copy service , DHCP server service
before i using symantec antivirus enterprise , then i change to trend micro scan mail , antivirus
my exchange 2003 also have problem , now i want to buy a new server to replace old server
how can i do ? how can i backup the AD system state to a new server , and then how can move or backup my exchange to a new server ? i have try to synchronize a new server to a second AD , the second AD also is can't use volume shadow copy & dhcp service , so if not synchronize a new server , how can i replace it
any good idea & solution

thank your very much
tequila

.
