Did a quick check, host headers are setup on the FE server for www and www.domainA.com, there are 3 virtual servers setup in system manager (default, www, and www.domainA.com) all use the cluster IP address, in IIS manager on the active cluster node there are 3 websites (one for each vserver) all are started.

New error 500 internal server error, can't find it in the logs, but here are the IIS logs, see what you can make of this.

>>From the active cluster node IIS logs last failure

#Software: Microsoft Internet Information Services 6.0

#Version: 1.0

#Date: 2006-01-31 14:28:41

#Fields: date time s-sitename s-ip cs-method cs-uri-stem cs-uri-query
s-port cs-username c-ip cs(User-Agent) sc-status sc-substatus
sc-win32-status

2006-01-31 14:28:41 W3SVC102 10.0.1.240 GET /exchange - 80

DOMAINA\Administrator 10.0.1.1

Exchange-Server-Frontend-Proxy/6.5+Mozilla/4.0+(compatible;+MSIE+6.0;+Windows+NT+5.2;+SV1;+.NET+CLR) 500 0 0

2006-01-31 14:30:25 W3SVC102 10.0.1.240 GET /exchange - 80

DOMAINA\Administrator 10.0.1.1

Exchange-Server-Frontend-Proxy/6.5+Mozilla/4.0+(compatible;+MSIE+6.0;+Windows+NT+5.2;+SV1;+.NET+CLR) 500 0 0

As you will know, 10.0.1.1 (www) is the address of the FE server (the cluster is 10.0.1.249 (myCluster))

I was on a windows 2003 machine and I wanted to get to the exchange directory using the addresss <http://www.domainA.com/exchange>

That's all I can tell you for now, at least I know that the request is reaching the cluster, just failing when it gets there.

Hope this helps
Shaine
