Hi Nuevo

I do not see and conflicts that might stand out could you provide me with an example of what I might look for. Thanks

Hi All

I am running Windows 2003 w/sp1 and Exchange 2003 w/sp1 and when I some of my internal users attempt to send e-mails to a mail-enabled public folder they receive a NDR message with an error code of 5.2.1. I know that the error code means that their is either a size problem or permissions. I do not

Re: NDR message sending internal e-mail to a mail-enabled public f

think

it is a problem with the size because just sending a normal
test e-mail

produces the error and the permission on the public folder
has both

default

and anonymous set to contributor. Thanks in advance for any
help

provided.
