Do you have other Exchange 2003 servers, or is this the first one?

If you do not have others, then Exchange 2003 Forestprep needs to be run. If you are only a Domain Admin, you do not have rights to update the Schema. You need to be a member of the Enterprise Admins and Schema Admins groups (as well as Domain Admins) in order to do that. If your account is not a member of those groups, then you can log in with an account that is, and \*just\* run Forestprep. You can do that using the Deployment Tools (exdeploy from the CD) or by running setup.exe with the /forestprep switch.

Hi all,

When I tried to upgrade the exch2000 frondend to the exch2003, I got this error"Setup failed while installing sub-component Microsoft Exchange server-level objects with error code 0xC0070574(please cousult the installation for a detailed description)  
BTW, I am using the account with exchange full admin rights and doamin admin

here is the detail from the setup log:

```
10:12:20] Using cached result for domain "/dc=company/dc=local"  
[10:12:20] The required permissions have not already been set  
[10:12:20] Leaving
