Unfortunately, the answer is no. You "might" find some sort of 3rd party plugin that allows you to connect using the Mail program to multiple servers using, say, Http (WebDav), but I've personally never seen anything like that.

You're correct, Ben. We have simply disabled the functionality on Exchange.
I understand we COULD enable secure POP or IMAP, but we haven't done so.

My question remains – is there a way (besides enabling POP or IMAP) to grant users access to multiple Exchange mailboxes on their Treo?

"Ben Winzenz [Exchange MVP]" wrote:

The question seems to be whether you want the functionality of accessing multiple mailboxes (like you did in Sendmail), or whether you want the added security that you believe disabling POP3 and IMAP provides. The "we used to be able to do this on..." gripe isn't valid, because you *can* do that with Exchange. You've just chosen to disable that functionality.

Re: Teo and multiple Exchange accounts

The capability of handheld devices is rather limited. They can connect via POP3 or IMAPv4, or if they are Windows-based (or the 650), they can use ActiveSync.

What are your security reasons for disabling POP3 and IMAP? If it's passwords being transmitted in plain text, then you can always set up the POP3 and IMAP servers to require SSL so that the connection is encrypted.

We have recently migrated to Exchange 2003 and are dealing with the "we used to be able to do this on <insert name of any mail server here>..." gripes.

One of the things that certain high-end users are complaining about is the fact that they are no longer able to access their multiple mailboxes using a Treo device. Previously, they would just create a bunch of POP or IMAP connections to the Sendmail server and access all their mailboxes, but we have not enabled POP or IMAP to the Internet for security reasons (although users can use IMAP after making a VPN connection). Anyway, is there any way that users can, without a lot of effort, connect to 2 or 3 mailboxes using their Treo's? We have users set up with ActiveSync,

Re: Teo and multiple Exchange accounts

but that only gets you one mailbox. We are willing to investigate add-on solutions if necessary. The idea of using OWA from their Treo's was shot down quickly.

Thanks in advance.

Dave
