Test Blackberries after disabling IMF from the smtp virtul server – does that work?

Alternatively, set your gateway threshold to Archive instead, and test. Do you see Blackberry messages ending up in the Archive directory in mailroot? I haven't seen any BB messages being blocked by IMF yet, not to say that it isn't possible.

Hey,

We have just upgraded to exchange SP2, and have the IMF filter set at 6, which is working perfectly.....

I have noticed though that anyone here who has a blackberry and tries to send email, the email gets bounced back, blocked by the IMF filter.

I have talked to Rogers, and Telus, we have users of both carriers, and neither one of them can/will help, saying that its a IMF problem.....

I know it is the IMF that is blocking these emails from the BB's because it started right when we upgraded, also the delivery bounce back states the message was refused.

PLEASE HELP!!!!!!

Thanks,
