Did you look at the link that I included in my previous reply? It explains how you can implement an event sink, but you have to have a dedicated bridgehead server for it to work properly. It is limited in that if you implement it on a regular mailbox server, any clients that submit messages via MAPI (Outlook set up with Exchange account) will not get the disclaimer applied.

If you have a Front-end/Back-end deployment, it could be implemented on the Front-end server if you route all outbound mail through your FE server.

If you have a single server setup, then yes, you need to find a 3rd party solution to do the disclaimer bit. Or wait for Exchange 2007.

hm..Maybe I didn't explain myself clearly, I just want to add few lines
ex.
(This email (including all attachments) may contain personal information
and
is intended solely for the named addressee. It is confidential and may be
subject to legal or other professional privilege. Any confidentiality or
privilege is not waived or lost because this email has been sent to you by
mistake. If you have received it in error, please let us know by reply
email, delete it from your system and destroy any copies), so every
outgoing
email will have like signature.

Do I have to buy new software just for that?

Short answer? Buy a 3rd party disclaimer product. Most of them aren't that expensive.

If you have a dedicated Bridgehead server (no mailboxes), then you can look into the VBS event sink free method that is available from MS, but I personally don't like that solution as it is very limited, and is just a blob of text.

How do I setup all email messages in company to use one disclaimer?
