I have Exchange 2003 Enterprise running on an older box. Bought a new Box to Host Exchange. I have not been able to find articles that step by step describe moving an exchange server to a new box with a new name. My Data Store is now approaching 38GB (yes, thats right). would someone please point me in the right direction. I don't mind doing the reading, just need to know where to look. Microsoft Exchange Server 2003 (Administrators Pocket Consultant is no help) Petri.co.it is a help, but not on this topic.

.
