

Re: Email Delyed

recipient could not be found in Domain Name Service (DNS). Please verify the email address and retry. If that fails, contact your administrator.

After I made the change to pop3.domainname.com, I get the following message:

This is an automatically generated Delivery Status Notification.

THIS IS A WARNING MESSAGE ONLY.

YOU DO NOT NEED TO RESEND YOUR MESSAGE.

Delivery to the following recipients has been delayed.

The messages are never delivered. Any thoughts on what I need to change?

Thanks!

Hi – since you're mentioning "the POP connector" I'm presuming you're using SBS. Exchange doesn't have a POP connector – note that any questions related to that config should really be posted in microsoft.public.windows.server.sbs.

That said – the error you're getting is pretty clear; your server can't find pop3.domainname.com in DNS. Can you ping that and get an address in return? Telnet to it on port 25?
