I have been attempting to access my Exchange server via the web. With IE I get the "loading" error. With Mozilla FireFox I am able to gain access, send and receive emails but none of the button jpgs or gifs show up. My Exchange is behind an ISA server. I have checked all of the settings for my SMTP virtual server and they appear to be correct. i have looked at IE settings and scripting is allowed as well as all sites are set to defaults. This problem occurs with all of my end users who attempt to connect to Exchange remotely so it isn't a local machine issue it has to be either the Exchange server or the ISA server. I have even disabled my anti-virus software on the ISA server just in case. This appears to be a scripting issue but I'm not sure. My IIS log looks like the following: 2006-10-31 21:34:49 192.168.254.4 GET /exchweb/img/addrbook.gif - 80 - 192.168.254.3 Mozilla/4.0+(compatible;+MSIE+7.0;+Windows+NT+5.1;+.NET+CLR+1.1.4322) 401 1 0.

I think there should be some WEBDAV verbiage following the GET in the string but I'm not sure. Can anyone help me out with thjis/ Thank you
