telnet moses.stphilipchurch.com 25
Connecting To moses.stphilipchurch.com...Could not open connection to the host,
on port 25: Connect failed

telnet 66.126.247.115 25
Connecting To 66.126.247.115...Could not open connection to the host, on port 25
: Connect failed

What's wrong with my telnet command? I'm doing this from the command prompt.

It looks fine for me. I see your Exchange Server's SMTP banner.

The server name is moses.stphilipchurch.com. Thanks!

Yes, the name is the same for both inside
and outside the LAN, and it's
the
same name on the MX record on my ISP's
DNS server.

When I do a telnet to say port 80, it works.

Are you using the correct
host name from the Internet,
i.e., the one
specified in your Internet
DNS A record that's referred
to in the MX
record?

The external host name need
not be the same as the
internal host name.

Hmm... I
tried to do a
telnet
servername
25 from
within my
LAN and
I'm
able
to
communicate

Re: unable to send outbound mail using outlook

with my
mail server.
But when I
try to do the
same
thing
from
the Internet,
I get a
connect fail.
But I don't
really know
why?

Wouldn't
the port
need to be
open for my
mail server
to be able to
receive
Internet
emails
(which is
transferred
using
SMTP).
DNS MX
record for
my
domain
points to
this mail
server and
we are
receiving
emails.

But yes,
right now
my Relay
Restrictions
have "All
except the
list
below"
checked
(list is
empty).

Sorry...
my
mistake.
I
simply
enabled
message
relaying
and
it
works
now.

Let's
hope
you
don't
mean
that
you'll
let
/anyone/
use
your
machine
as
a
SMTP
relay!

Re: unable to send outbound mail using outlook

FAQ

at

http://www.swinc.com/resource/exch_faq.htm

Don't

send

mail

to

this

address

<mailto:h.pott@xxxxxxxxxxxxxx>

Or

to

these,

either:

<mailto:h.pott@xxxxxxxxxxxxxx>

<mailto:melvin.mcphucknuckle@xxxxxxxxxxxxxx>

<mailto:melvin.mcphucknuckle@xxxxxxxxxxxxxx>
