I've applied the DST patches to several clients now, both Ex2k and Ex2k3 servers. In all cases, no users have send As permissions after installing the patches. Even if I specifically go back and grant the permissions per KB912918.

Let me explain: I have numerous clients I've configured with user accounts set in an alternate OU so I could lock down user permissions while logged on to terminal servers (instead of using loopback GPO processing). These user accounts aren't mail-enabled but have full access rights on their normal domain accounts' mailboxes (i.e. user 'ts_sam' has full rights to user 'sam' mailbox).

After applying the DST Exchange patches (926666 and that bargain-basement-priced Exchange 2000 patch) none of the alternate OU accounts can be granted the 'Send As' rights needed to use email.

what gives?!?

I have something similar. I have a user that logs in as himself, opens Outlook and another Inbox (he had previous permissions to Send As) but continues to receive the following error:

Your message did not reach some or all of the intended recipients.

Subject: Test this
Sent: 3/6/2007 1:03 PM

The following recipient(s) cannot be reached:

Username on 3/6/2007 1:03 PM

Re: DST and Send As Permissions?

You do not have permission to send to this recipient. For assistance, contact your system administrator.
MSEXCH:MSEExchangeIS:/DC=com/DC=Domain:EXCH
=====

I have been looking at KB 907434, and have made the changes, waited the one hour, however the user still cannot Send As for the specified account.

thks,

Jim

- The users weren't able to send messages as themselves using Outlook, when logged in as themselves? Or did they use a mobile device like BlackBerry?
- It's an issue with stuff that explicitly needs Send As permissions - the Full Mailbox Access and Send As permissions were separated in a previous hotfix, which is included in KB 926666 (Exchange CDO patch), but it should not impact users logged in as themselves trying to send messages from Outlook.

Could someone explain this to me? After doing the updates and re-basing, a couple users started getting the don't have permission to send errors. So I have to go into AD Users and give them permission to send as themselves. What happened and why to just a couple random users?
