Try this script.

"This script combines ideas from my previous 2 articles content filter and scanning script and mailbox crawl script. To create a content scanning script for attachment types that can crawl through a entire mailbox store or certain mailboxes and provide reporting on or removal of certain attachment types. "

Combined Content filter and Mailbox Crawl Script

<http://www.outlookexchange.com/articles/glenscales/mcraw2.asp>

Or third party app.

ExchangeCompress (exe)

Strip the attachments from the email and store the attachment on disk as a file in either a shared network location or the user's home directory.

you can create an exmerge bat file that will use the ini file with the date and attachment you want to delete, other than that you will have to program it

Hi All,

A question!! Is it possible to define an exchange rule that can monitor a mailbox for certain file types and then delete them after a defined time period?

We need to be able clear a specific mailbox down of a specific file type each month and may need to do this across a few mailboxes.

Any suggestions?

Cheers,
