A client can send us an e-mail just fine, but when they add an attachment they receive the following error:

There was a SMTP communication problem with the recipient's email server. Please contact your system administrator.

<exchange2003.THEIR\_MAIL\_SERVER.com #5.5.0 smtp;553 sorry, that domain isn't in my list of allowed rcpthosts (#5.5.3 - chkuser)>

So, is this an issue on their server or ours?

I would suggest that is a problem on theirs unless you have any kind of software in front of Exchange that checks for attachments or does any kind of pre-processing.
