In article <1191266666.377315.133930@xx>, markm75c@xxxxxxx says...

Due to problems getting everyone's spam to go to the junk email folder, I chose to set the Actions to "move to subfolder of users mailbox".. with the format.. Inbox/spam..

I did a test message.. it got flagged properly and logged, stated it was moved to this spam folder, yet in the user's box, there were no email messages. I'm not even sure what happened to the original email.

Has anyone gotten this to work? Does it matter if the folder already exists or not? (in the test case it already exists)..

What does the help file say?
