manoa,

let me guess, you just patched your server with the 6666 devil patch.

<http://support.microsoft.com/kb/926666/en-us>

i had the same problem here with my bes server as well

you can read this up at blackberry support.

http://www.blackberry.com/btsc/search.do?cmd=displayKC&docType=kc&externalId=KB04707&sliceId=SAL_Public

what i did was uninstall the KB926666 patch. it is fixed after that.

regards,
zhi

Your BESAdmin account should be a member of Domain Users, *not* a Domain Admin.

The BES installation instructions have detailed information on how to grant the necessary Send As permissions for the Users container based on your Exchange version.

Re: send as permission

permission"

for all the users. Should I just use the built in group Domain Users and give the new account I created the "send as permission"?
