When I open up IIS, and I click to expand my server name (a windows 2000 SBS machine) and then expand the "Default Web Site which we are using to provide remote Outlook Web Access (OWA) (using an SSL certificate), I see a red stop sign with the word "Error" written inside – to the left of the "Public", "Exchange" and "Exadmin" components.

How do I find out what is causing this to be displayed? Things seem to be working?

Thanks, Brad

IIRC, that's an old bug in Exchange 2000. Restarting the IIS was the fix.

It was something to do with IIS starting up before Exchange. IIS tried to connect to the VDirs before Exchange was ready to support them, so the stop signs appeared. Looked untidy, but didn't affect the operation, though.

Lee.
