Been a while since working on Exchange and windows Clusters.

So is there a article/KB or can you verify this for me please.

- 1). Windows Cluster , Hosts and Exchange CMS all need to be on same subnet?
- 2). Public and Private NIC's should be on different Subnets?

So for a 3 node AAP SCC cluster

I'd need minmum....

3 VIPs (Windows Cluster name, 2 CMS)

6 Static IP's (3 Public, 3 Private, a Pub and Private on each Host.

Thanks in advance

.
