Yes, it grow by 30G a month, so I worry it's not enough for storage handle by exchange.

Set Send and receive limits so you dont go over the limit or upgrade to Enterprise.

Can it auto archiving without user press any key ?

Sure. Outlook can auto-archive, mailbox Manager or 3rd party software. The problem there is you are deciding what should be removed based on date which doesnt always make sense.

If you want to keep it , you need a 3rd party solution otherwise users will just push their messages to a pst or public folders and that will make it worse.

You have 15 users whose mailboxes grow by 30GB a month? The limit doesn't apply to sending/receiving – only to the amount of mail stored in the database. If they keep their mailboxes fairly lean by deleting/archiving then it's not a problem.

Re: email capacity

Otherwise...get the Enterprise edition and a lot of storage space.

How many GB for max. of  
capacity for exchange server  
2003 support?

Standard : 75GB with SP2  
Enterprise – really only limited by storage  
capacity and SLA  
requirements.

Re: email capacity

If the user using IMAP, all  
email store in server, so  
what is the best  
way  
to manage email ? store in  
other location or what else ?

Keep in the store if its important.

Thanks
