Hello.

I'm running Exchange 2007. Inside the Exchange Management Console, I have a user that has IMAP4 enabled. However, when I look at this user in AD, IMAP4 does not show up as a protocol. Every other user I have has IMAP4 enabled in the Exchange Management Console and I can see IMAP4 as a protocol in AD.

Unfortunately, this user one cannot get his email through IMAP4. Thus I believe I need to get this IMAP4 setting to synchronize with AD. I am unable to figure out how to do this.

Thanks in advance.
