You can Exchange system manager to view properties of the desired folder and then assign administrative permissions to desired user using the Permissions tab.

So after you locate the folder, Right click>> Properties>> Permissions>> Administrative Rights.

Here you can grant the desired rights.

We are a multi-national company and public folder hosted in head quarter. I am an administrator in head quarter and planning to delegate subfolder to country to manage. Search in Microsoft knowledge and Internet but can't found solution. Hope can found solution here.

Thanks

.
