Thank you, Robbin, but the ContentType is already set to Mimetext, yet the recipients are getting both text and html in their messages.

Hello Mike,

Re: EX07: force remote message to plain text

Thank you for your post.

Please allow me to confirm that my understandings are correct. As I understand it, the issue is:

You would like know how to force Exchange 2007 server to strip out the html and only send the plain text version of the message?

If I have misunderstood your concerns please feel free to let me know.

Have you tried using cmdlet "Set-RemoteDomain -ContentType"?

Use this -ContentType parameter to define the outbound message content type and formatting. Valid values for this parameter are MimeHtmlText, MimeText, MimeHtml.

" MimeHtmlText converts messages to MIME messages that use HTML formatting, unless the original message is a text message. If the original message is a text message, outbound message will be a MIME message that uses text formatting.

" MimeText converts all messages to MIME messages that use text formatting.

" MimeHtml converts all messages to MIME messages that use HTML formatting.

The default value is MimeHtmlText.

Run the following cmdlet to verify the current value of the ContentType setting in Remote Domain

```
Get-RemoteDomain | FL
```

If it is MimeHtml, then run the following the cmdlet to change its value to MimeText, which convert all mails to Plain Text only.

```
Set-RemoteDomain -ID Default -ContentType MimeText
```

Then restart the Exchange Transport Service.

For more information on Set-RemoteDomain cmdlet, see

[How to Configure Message Format Settings for a Remote Domain](http://technet.microsoft.com/en-us/library/bb125174(EXCHG.80).aspx)

Hope this helps. Also, if you have any questions or concerns, please do

Re: EX07: force remote message to plain text

not  
hesitate to let me know.

Thank you for your time and cooperation.

Best regards,

Robbin Meng(MSFT)

Microsoft CSS Online Newsgroup Support
