Client Access Server. In other words, try running the command on the machine that has the CAS role, not from, say, a machine that only has the Mailbox role installed.

Hi James,

Thanks, (forgive my ignorance, I'm new to exchange) but what is a CAS role?

"Jamestechman" wrote:

Try running from a CAS role; see if you can do just Get-ReceiveConnector. If that works then try Get-ReceiveConnector "servername\LISTSERV SMTP FWD"

If that doesn't work try updating your Exchange 2007 to sp1 RU3 if it isn't.
