Morning,

I have outlook web access app running on Exchange 2003 (SBS 2003, IIS6). The web app is throwing this error when browsing to:

<http://domain.com/mail>

---

There is a problem with this website's security certificate.

The security certificate presented by this website was not issued by a trusted certificate authority.

The security certificate presented by this website was issued for a different website's address.

Security certificate problems may indicate an attempt to fool you or intercept any data you send to the server.

We recommend that you close this webpage and do not continue to this website.

[Click here to close this webpage.](#)

[Continue to this website \(not recommended\).](#)

---

Clicking CONTINUE allow app to work but not over SSL (certificate error).

<https://domain.com/mail>

---

Internet Explorer cannot display the webpage

Most likely causes:

You are not connected to the Internet.

The website is encountering problems.

There might be a typing error in the address.

What you can try:

Check your Internet connection. Try visiting another website to make

## exchange 2003 web mail certificate error

sure you are connected.

Retype the address.

Go back to the previous page.

More information

---

Just checking the options to solve this problem:

1. install an SSL certificate ? (ether via an vendor like GeoTrust or using my own certificate server) ?
2. use http only (no ssl 443) ?
3. suppress the error somehow ?

What is recommended ?

Thanks

Scott
