Hi Everyone,

I posted a similer query 10 days back but there was no responce to that. here with i am resending similer query. please help in in resolving this issue.

I am facing some issues with MAPI. I am trying to get mailbox information from 2000/2003 and 2007 exchange servers. For this MAPI seems to be the only common approach (except we have to install cdo libraries speratly on 2007).

I am running my code repetedly for each 1 min to get this information. For nearly 10–15 times it fetched this info properly but after 10–15 times "MAPIInitialize(NULL)" call is failing. But again after 2–3 failures it started fine and continued fetching information for nearly 10–12 more cycles and failed again. I kept counter to see mapiinitialize and mapiuninitialize calls are in sync. Everything seems to be fine. But still not getting why mapiinitialization is failing some times.

Please help in resolving this issue.

Regards,
Shivaraj
