If you mean what the are the ideal client requirements to get the most bang out of Exchange 2003, then the answer is:

Client side requirements

- \* Windows XP (SP2), Windows XP (SP1) + KB 331320, or Windows 2003
- \* Outlook 2003

Server side requirements

- \* Windows 2003 Active Directory (DC/GCs are Windows 2003)
- \* Exchange 2003 on Windows 2003

#1 Reason:

- \* If the plan is to use RPC over HTTPS, then the client operating system *must* be Windows XP or newer due to some RPC improvements. MS has no plans on rolling these changes back to Windows 2000.

If RPC over HTTPS is not a concern, then Office/Outlook 2003 will install on Windows 2000 (SP3) or newer.
