I don't keep spam around. I've deleted that message. I shall post the headers of the next spam that I receive.

I hope you can fix this. I'm a middle-tier/backend developer. I don't have a lot of JavaScript experience. And I haven't worked with CDO either, which is what you're using, I guess.

Well, I'm just asking for the entire header text, which is contained in a single field. I'm not building the header myself, or anything like that. If you can show us what is displayed, we can see if it displaying a valid header.

The SpamCop parser displayed all the usual messages about the header that it parsed except it said it couldn't find a message date in the header.

Could you please fix this?

Thanks.

What did it display for the headers?

Re: Mail headers in OWA

Your JavaScript has some kind of a bug. I need the mail headers so that I can report spam at a service at www.spamcop.net. This service parses the headers and the message you paste in to determine who it should send the spam report to. Usually, it's send to the ISP where the spam originates. When I tried to paste the headers I retrieved through your JavaScript from a spam message that I received, the SpamCop parser couldn't find a proper date for the message. So, I was not able to report the spam that I received.

Could you please fix this?

Thanks.

How can I view the mail headers of a message in OWA that comes with Exchange 2003? I don't see a way to do this?

Thanks.

Re: Mail headers in OWA

I did a little addin that
should do it. 2nd link here:
