SHivan,

Try changing 'file:\\.\backofficestorage\localhost\public folders' to 'file:\\.\backofficestorage\primarysmtpdomain.com\public folders' where primarysmtpdomain.com is the domain name specified in Exchange's Default Recipient policy Primary SMTP address.

and the query as a test using

```
SELECT
Convert(nvarchar(30),"urn:schemas:contacts:sn")
    LastName,
Convert(nvarchar(30),"urn:schemas:contacts:givenName")
    FirstName
FROM OpenQuery
(Exchange,'SELECT "urn:schemas:contact:sn",
    "urn:schema:contacts:givenName"
FROM SCOPE("shallow traversal of ".\contacts"'))
```

Note the upcase N in givenName and the two single quotes before shallow and after the double quote after contacts

--

Hope that helps,

David Copeland
