Look for 9318 or 9322 events in your application log. If you are getting these, check the error code. If it is a 1722, this is an RPC bind or bindback problem that is typically caused by DNS. If you get these, try adding a host file on both sides pointing to the other servers by "ip to host" as well as "ip to FQDN". Also verify the version of emsmta.exe in your exchsrvr\bin folder. You want at least 5.5.2654.89 to help with this issue.
