Hi All

I have a Ex2007sp1 server that I can connect to via telnet on port 25.

From and XP box I can send a message without any issues

When i connect I get

```
220 mail.xxxxxx.net Microsoft ESMTP MAIL Service ready at Fri, 10 Oct 2008
08:4
3:15 -0400
```

However when I try on a windows 2003 server I am having issues. It can make a connection, however this is the reply I get when connecting

```
220*****
```

When I do a helo command I get

```
500 5.3.3 Unrecognized command
```

I have added a new connector for this connection and only allowed from the IP address of the server in question and my own and gave anonymous permissions for this connector

Any help would be greatly appreciated!

Wayne
