After changing the setting, it works fine.

In Activation tabk, Click setup new service, select Automatic in "Service Type" and COM+ Event sytem on the lower list box and then click create
Thanks

Hello,

no, by client location I mean on networks of my clients.

Event sinks must be registered directly on the server.

Could you post your COM+ application settings here? Perhaps that may help.

Best regards,
Henning

Hi hennig
I want to know here one thing that what u mean here by client locations. Do u mean that you deployed EventSink on the client machines rather than the ExchangeServer itself. I am asking this as i

Re: How to make the event sink run automatically

have
heard that EventSink can be used and registered on the
server only and
we can't register EventSinks from any client machines.
Please make me confirm if i am thinking something wrong ?

Best Regards
Parveen Beniwal

Hello,

I haven't heard yet of this behavior – the
COM+ application should start
automatically with the server – even more as
you have configured the
component to run in a dedicated server
process. Is this service set to
start
automatically or set to manual (See the
services MMC).

I have several eventsinks deployed at client
locations, and none show
these
behavior.

Hi Henning,

After the server restarted or
shut down, I must restart the
COM+
application
too; otherwise the sink is no
effect. Do you tell me how
can I set up
my
COM+
application can start even

Re: How to make the event sink run automatically

the server restart?

"Henning Krause [MVP – Exchange]" wrote:

Hello,

the Event
should be
triggered
after a
restart of
the
Exchange
store.

But there is
(was) an
issue with
Store-wide
event sinks
and
Exchange
2003,
perhaps this
applies to
you:

<http://support.microsoft.com/kb/872822/en-us>.

Otherwise,
are there
any events
logged in
the
Eventlog?

Best
regards,
Henning
Krause

How
to
make

Re: How to make the event sink run automatically

the
event
sink
run
automatically

I
succeeded
to
add
the
COM+
application
and
to
register
the
event
sink.

It
works
fine.
However,
after
the
server
shuts
down.
The
COM+
application
cannot
start
automatically.

I
already
set
it
as
a
system
application
and
run
application
as
NT
Service.
Please
tell
me

Re: How to make the event sink run automaticaly

what
I
should
do.
Do
I
need
to
write
a
script?
If
so,
would
you
have
any
example
or
site
which
I
should
look
at?

Thanks
in
advance.
