

Exch 2003 Install continues to fail

Hello again.

On March 1 I wrote the letter below and received reply from Ward Flowers. Only now have I been able to try the re-install.

- 1) I fully removed Exchange 2003 from the server including the registry and AD following <http://support.microsoft.com/?id=260378>
- 2) During domain prep I received a message that my domain is an "insecure domain for mail-enabled groups with hidden DL membership..."
- 3) I followed the instructions of <http://support.microsoft.com/?id=278523> as suggested below before FOREST PREP and repeated them again before EXCHANGE SETUP.

Nothing changed I still get the same error messages as before:

"Setup failed while installing sub-component System Attendant service with the error code 0xC00703E5 (Please consult the installation logs for a detailed description). You may cancel the installation or try the failed step again."

I have attached the log files again.

FYI, the Windows server I am trying to install Exchange on is a DC, DNS server and a file server (we have a small organization with just 30 users). I am beginning to think I should get another computer to install exchange on.

Thanks for your help.

John

microsoft.public.exchange.setup: Exch 2003 Install continues to fail

news:uUBDA68\$DHA.3352@TK2MSFTNGP09.phx.gbl...

I am trying to do a new install of Exchange 2003 on Windows server 2003. I have followed all the deployment procedures with success. During the installation of Exchange Messaging and Collaboration Services, I get the error message:
"Setup failed while installing sub-component System Attendant service with the error code 0xC00703E5 (Please consult the installation logs for a detailed description). You may cancel the installation or try the failed step again."

The log files are attached.

Applog shows the following errors:

The dsproxy.dll file exists in Program Files/Exchsrvr/bin.

What do I need to do?

Thanks,

John
